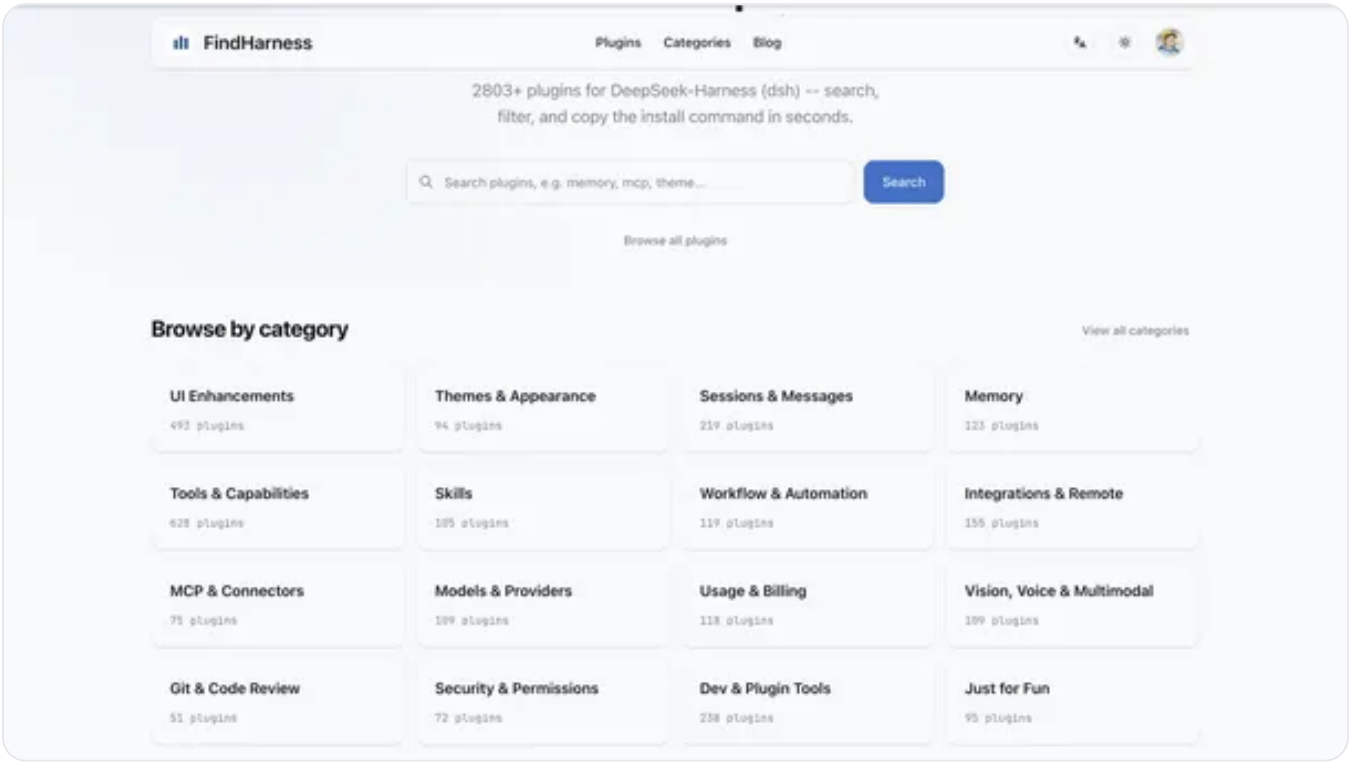
FindHarness

A community index for browsing and installing DeepSeek-Harness plugins fast.



About

FindHarness is a DeepSeek-Harness plugin directory that helps you discover, filter, and install dsh plugins quickly. It indexes the community ecosystem, shows plugin listings with categories and popularity signals, and lets you copy the install command without digging through scattered repos. If you are trying to choose the right plugin for an agent workflow, UI layer, memory helper, or connector, this site gives you a centralized starting point.

What is FindHarness

FindHarness is a community-run DeepSeek-Harness plugin index built around the dsh

marketplace, so FindHarness fills the discovery gap with a searchable catalog of plugins and related metadata.

It currently shows 3,294+ plugins for DeepSeek-Harness (dsh), with daily additions noted on the site. The homepage highlights trending, recently updated, and most saved plugins, which makes it easier to spot active projects rather than only browsing static lists.

In practice, FindHarness acts like a plugin directory for an open-source agent harness. You can use it to compare names, categories, repo sources, and install paths in one place before you install anything into your dsh setup.

Key features

- Browse the plugin ecosystem with search and category filters.
- Sort through broad groupings such as UI Enhancements, Memory, Tools & Capabilities, Workflow & Automation, Integrations & Remote, and Dev & Plugin Tools.
- View lightweight listing data such as repository owner/name, category, license when available, and popularity counters shown on the site.
- Jump into trending, recently updated, and most saved sections for a quick scan of what is active.
- Copy install commands in seconds instead of manually reconstructing package instructions from multiple repositories.
- Explore category pages that help narrow a large plugin directory into a specific use case, such as skills, connectors, or multimodal tools.
- Access product pages, plugins, categories, blog, login, sign up, and legal links from the top and footer navigation.

How to use it

- Start on the homepage and search for a plugin name, repo, or a feature you want to add to DeepSeek-Harness.
- Narrow the list using categories if you already know the plugin type you need, such as memory, UI, workflow, or integrations.

Copy the install command from the plugin page once you confirm the plugin matches your use case.

Check trending or recently updated lists when you want a shortlist of active plugins rather than the full catalog.

Who it is for

FindHarness is built for people who work with DeepSeek-Harness and want a faster way to discover plugins.

dsh users who need a central plugin index instead of hunting through GitHub.

Developers building on an open-source agent harness and comparing plugin options.

Maintainers who want to track ecosystem activity, new releases, and category trends.

Power users looking for install-ready tooling, connectors, and feature add-ons.

It is especially useful if you are deciding between similar plugins or trying to find a category-specific tool without browsing dozens of unrelated repositories.

What to know before you use it

FindHarness is an index, not the official DeepSeek-Harness project or an official marketplace. The site itself states that DeepSeek-Harness is open source and that the official repository is deepseek-ai/deepseek-harness, so you should use official docs or the upstream repo when you need authoritative installation details, compatibility notes, or project governance.

Because FindHarness is community-run, some listing data may change quickly as plugins are added, renamed, or updated. Counts, popularity numbers, and activity labels reflect what the index shows at the time of viewing, not a guaranteed real-time audit of every repository.

The platform helps you discover and copy install commands, but it does not replace reviewing the plugin source, license, or maintenance status before you install it into a production or sensitive environment. If a plugin affects security, permissions, billing, or core workflow behavior, confirm the details in the upstream repository and the official DeepSeek-Harness documentation first.

to start. For anyone building with this plugin directory, it is a fast way to narrow the search and move from browsing to install command copy in a few clicks.

FAQ
